

Portfolio Marketing Plan v2

30-Day Cash Sprint + 90-Day Value Plan · Prepared 2026-04-25 · Supersedes v1 (same date) · Merges Hormozi / Patel / Deiss 2025–2026 thinking into the original sales-led structure.

Core rule: qualified sales conversations beat generic marketing activity. OBT AI waits until tester capacity exists. Every offer ships with a 4-tier money model. Every page is built to be cited inside ChatGPT/Perplexity, not just ranked on Google.

1. Executive decision

This is not a general marketing plan. It is a **sales-led growth plan with a structured offer architecture**. The next 30 days are judged by:

- qualified conversations booked,
- pilot users recruited (when OBT capacity opens),
- wholesale interest generated,
- revenue or proposals created,
- conversion assets shipped (now including AEO citation surfaces),
- follow-up discipline,
- continuity revenue layer activated on at least one ecom store and Allhart.

Not by: posts published, dashboards, generic SEO volume, brand awareness, or new ideas explored.

Priority stack

1. Allhart AI outbound + AVP conversion pages + 4-tier money ladder
2. FOB/MRO wholesale outreach with close path
3. OBT AI pilot recruitment — pushed back until OBT has free bookkeepers
4. Reply handling, booking, proposals, follow-up, objection-loop into next batch
5. Email capacity, sender rotation, hygiene
6. MRO conversion recovery + Money Model adaptation (Ring Care continuity)
7. Maintenance ecommerce content and campaigns (one action/week per brand)
8. Tier 3 / separate-lane projects only after the above is moving

v2 additions vs v1: (i) Hormozi Money Model layered onto Allhart pricing and MRO; (ii) Patel AEO/GEO data leads the cold-email opener; (iii) sender-rotation pattern unlocks the 25/day cap; (iv) Vertical 1 pivots from accountants to trades; (v) AVP pages ship as live AEO demos; (vi) objection-log → next-batch copy iteration loop.

2. The frame: sales sprint with offer architecture

30-day goal

Create enough qualified sales conversations to produce near-term cash, *and* validate a four-tier offer ladder so each conversation has multiple close paths.

90-day goal

Turn winners into repeatable assets: proven 4-tier offers, proven AVP pages cited by AI search, working outreach sequences, case studies structured as FAQ schema, repeatable lead sources, cleaner ecom foundations, recurring revenue floor, less reliance on Nathan and Tessa manually pushing every project.

3. Critical priority matrix

Rank	Lane	30-day role	90-day value	This sprint output	Status
1	Allhart AI	Book paid website/AI conversations	Repeatable vertical offer machine + recurring retainer floor	2 verticals, AVP pages live with AEO/FAQ schema, 4-tier offer ladder, 25–50 approved drafts	DO NOW
2	FOB/MRO wholesale	Generate direct B2B buying interest	Repeatable wholesale channel	Offer sheet, 50–100 prospects, first approved outreach, sample-pack process	DO NOW
3	OBT AI	Wait for tester capacity	Productised AI workflow service	Notes only, no active push	PUSH BACK
4	Follow-up + objection loop	Convert replies; iterate copy	Compounding outreach quality	Reply triage, booking workflow, proposal templates, weekly objection-to-copy loop	DO NOW
5	Email capacity / rotation	3× outbound without 3× domain risk	Long-term owned acquisition asset	3 rotated senders mapped, dedupe, suppression, per-domain caps	DO NOW
6	MRO recovery + Ring Care Club	Protect earner + add continuity	Recurring revenue floor on ecom	Conversion fixes, 4-tier ladder live (silicone bundle / engraving / Ring Care subscription)	NEXT
7	Ecom maintenance	Keep stores healthy	Preserve portfolio value	One meaningful action per brand per week	LIMITED
8	Kaizen / FairTraide	Autopilot only	Optional long-term upside	No manual oxygen unless a clear signal appears	PARKED
9	Bento Frame	Decision gated	Potential white-label SaaS/service	Tiny test only if promoted	GATED
10	GLL / Nathan Art Net	Separate lanes	Brand/personal value	Not part of cash sprint	SEPARATE

4. Workstream 1 — Allhart AI revenue engine

Objective

Book qualified conversations with Australian professional-service businesses that need AI-ready websites, AEO citation, AI website rebuilds, or practical AI consulting. Convert each conversation through a 4-tier offer ladder, not a single quote.

Strategic correction (v2)

Treat Allhart as a vertical sales machine with structured offer economics:

1. choose the vertical,
2. verify the exact AVP page is live *and* AEO-ready (FAQ schema, comparison tables, "best X for Y" blocks, Q&A copy),
3. open every cold email with the AEO data hook, not the speed-of-site hook,
4. price the offer as a 4-tier ladder so we never lose a buyer over budget,
5. follow up twice with a useful new angle each time,
6. convert objections into next-batch copy edits each week.

Recommended first verticals (revised)

Vertical 1: Trades and building services

Why (changed from accountants): OBT proof bridge is unavailable while OBT is parked, so accountants no longer carry the credibility advantage. Trades — electricians, plumbers, builders, glaziers — have higher LTV per job, no compliance hesitation about AI, weak incumbent web agencies, and the clearest lived AEO question: *"How do I show up when someone asks ChatGPT for a sparky in Brisbane?"*

Best offer: AI Website Rebuild + Local AEO Citation Plan.

Angle: "Customers are skipping Google and asking ChatGPT for a recommendation. Most local trade sites are invisible to that search. Yours doesn't have to be."

Vertical 2: Dentists / allied health

Why: high customer value, trust-heavy buying journey, local competition.

Best offer: high-converting service site with AI-ready content structure.

Angle: "Patients compare you before they call. Your site needs to answer better than your competitors — including inside ChatGPT and Perplexity, where 1 in 10 high-intent searches now happens."

The 4-tier money ladder (NEW — apply per vertical)

Tier	Offer	Price	Job
1. Attraction	AEO Audit + Citation Plan — 1-hour audit of how the prospect's site shows up inside ChatGPT, Perplexity and Google AI Overviews; deliver a written action list and a 90-day citation roadmap	\$497 (or free with credit card on file as a "deposit applied to rebuild")	Qualifies the buyer, captures payment details, builds trust, surfaces objections
2. Core upsell	AI Website Rebuild — full rebuild on the AVP-page template, FAQ + comparison + Q&A	\$4,000–\$8,000 depending on vertical and scope	The main paid engagement

Tier	Offer	Price	Job
	blocks, schema, AEO copy, performance baseline		
3. Downsell	AI-Ready Content Pack — keep their existing site, add 6 AEO-optimised pages (FAQ, comparisons, decision guides) + schema	\$1,200–\$1,800 fixed	Captures budget-constrained buyers who would otherwise say no
4. Continuity	AI-Ready Maintenance Retainer — monthly: 1 new AEO page, citation monitoring across 5 LLM platforms, content refresh, monthly report	\$297/month	Recurring revenue floor, attached to every Tier 2 close, sold standalone after Tier 3

Hormozi's 2025 thesis: businesses that recoup CAC inside 30 days outspend competitors who treat each sale as a one-shot. The Tier 1 attraction offer means we recover acquisition cost on the first conversation. The Tier 4 retainer means each closed deal compounds.

Required AVP page structure (v2)

Every AVP page must be a working demo of what we sell. Required elements:

- page loads, CTA visible above fold, form works, tracking confirmed,
- copy names the vertical and offer specifically,
- **FAQ block with FAQPage schema** answering the 6 questions the prospective buyer types into ChatGPT,
- **Comparison table** ("us vs traditional web agency vs DIY"),
- **"Best for X" listicle block** targeting the long-tail conversational query,
- specific case study or proof asset (or a transparent placeholder if none yet — never fake),
- no internal/process language,
- page matches the outreach angle word-for-word.

Cold email opener (v2 — locked)

Hi [first name], I came across [business name] while looking at [vertical] in [city/region]. Quick observation — when I searched for "[their core query]" inside ChatGPT and Perplexity, your site wasn't cited in either answer. That matters more than it used to: AI search is still small in traffic terms (~1% of clicks) but it now drives almost 1 in 10 high-intent buying decisions for service businesses.

The fix is structural — schema, comparison content, FAQ depth, citation seeding — not a redesign. We do this for [vertical] businesses across Australia. Worth a 20-minute look at where you sit?

[Aussie closer]

— [signature]

Stat sourced from NP Digital 2026 LLM citation share research (Neil Patel) — verified before each batch.

30-day actions

A1. Confirm verticals. Output: written line "This sprint targets trades and dentists." Owner: Nathan + Tessa. **CRITICAL**

A2. Verify and AEO-equip AVP pages. Owner: Ash. Output: live pages with FAQ schema, comparison table, listicle block, case-study slot, opener-matching copy. **CRITICAL**

A3. Build first prospect list (50/vertical). Owner: research agent. Each row: business name, website, contact email, location, vertical, observed AEO gap (specific query they don't show up for), best offer angle, page to link, dedupe status. **CRITICAL**

A4. Draft 25–50 emails using the v2 opener. Owner: Ash drafts, Nathan approves. Output: approval-ready batches matched to the AVP pages. **CRITICAL**

A5. Follow up twice with new angle. 3–4 days then 7–10 days. Never "just bumping". Each follow-up adds a useful second observation (e.g. one specific page that already ranks but isn't AEO-cited).

A6. Price the ladder, never the rebuild. Every reply that asks "how much?" gets the 4-tier framing, not a single quote. Tier 1 first if they're cold; Tier 2 if they're warm.

90-day value growth

By day 90, Allhart should have: 3–5 validated verticals, one proven 4-tier ladder per vertical, AEO-equipped AVP pages, outreach templates with real reply data, 3+ case studies (each shipped as FAQ-schema content for the next round of AEO seeding), a weekly outbound rhythm, a simple proposal/quote system, and a baseline of \$X/month in Tier 4 retainer revenue independent of new sales activity.

5. Workstream 2 — OBT AI (pushed back, unchanged from v1)

OBT AI is not a current 30-day cash lane. The blocker is tester capacity inside OBT, not marketing. Hold preparation mode until Nathan confirms OBT has free bookkeepers.

Light preparation only

- keep notes on possible workflows (best first: bookkeeping query triage),
- collect use cases from existing OBT conversations,
- do not build a major funnel,
- do not recruit externally until Nathan greenlights.

Pilot pitch (when ready): *"We're building a practical AI workflow for bookkeepers and want 5 blunt pilot users to help shape it."*

6. Workstream 3 — FOB/MRO wholesale close system

Objective

Create a simple B2B wholesale revenue lane using FOB pocket watches first, MRO rings second.

Strategic correction

Wholesale is not just "send emails" — it needs a defined close path before a single email goes out. Define MOQ, wholesale pricing/margin, sample pack, shipping terms, reorder path, who follows up, and what counts as qualified interest.

Best first FOB offer

Giftable pocket watches for Australian gift shops, low MOQ, fast local fulfilment.

30-day actions

W1. Wholesale one-pager. Product range, buyer type, MOQ, sample option, terms, shipping timing, reorder process, contact CTA. **CRITICAL**

W2. 100 verified prospects. Gift shops, tourist shops, boutique retailers, menswear, jewellers, regional retailers.

W3. Drafts + 2 follow-ups approved. Opening angle: *"We supply giftable pocket watches that work well for small retailers looking for something classic, affordable, and easy to display. Sample pack on us if you'd like a feel before committing."*

W4. Reply-to-order workflow. If interested → send offer sheet, ask store type and quantity, offer sample pack or starter order, follow up in 3 days, log outcome. No interested retailer gets lost.

90-day value growth

First buying accounts or serious prospects, sample/order process, margin clarity, reorder reminders, small wholesale CRM.

7. Workstream 4 — follow-up, booking, proposal, objection loop

Objective

Stop revenue leaking after the first reply *and* compound copy quality batch over batch.

Required system

F1. Reply triage. Classify every reply: book a call, wants pricing, wants more info, not now, wrong person, objection, bounced.

F2. Booking workflow. Every positive reply gets one clear next step: short call / pricing sheet / pilot intro / sample pack / proposal.

F3. Proposal templates. Allhart rebuild (Tier 2), Allhart AI consulting starter (variant of Tier 3), Allhart AEO Audit (Tier 1), Allhart Maintenance Retainer (Tier 4 standalone), OBT AI pilot invitation (when unparked), FOB wholesale starter order.

F4. Objection library. Track weekly: too expensive, already have someone, not interested, timing wrong, unclear offer, wants examples, wants pricing first, doesn't trust AI search yet.

F5. Objection-to-copy loop (NEW)

Every Friday: take the week's three most-frequent objections, edit the cold-email opener and the AVP page copy to address them *upfront*. The next batch always inherits last week's lessons. Hormozi's "volume creates skill" applied operationally: reps don't compound unless the next rep is sharper than the last.

8. Workstream 5 — email capacity, rotation, hygiene

Objective

Use outbound safely and consistently without risking domains or inboxes — and without letting the per-domain cap throttle the whole sprint.

Strategic correction (v2)

v1 treated 25/day as a hard ceiling. Patel's deliverability data: 30–40/day per address is the real per-domain limit, and **rotation across multiple addresses is the legitimate way to scale beyond it**. Allhart already has multiple aliases (per the mailboxes wiki). Three rotated senders = ~75–90 quality sends/day at the same per-domain risk profile.

30-day actions

- map current aliases and confirm safe per-alias daily caps,
- set up 3-sender rotation across the Allhart aliases (round-robin by prospect),
- confirm sent-log dedupe is active across all senders,
- maintain suppression lists across senders, not just per-alias,
- monitor bounce/reply quality by sender — pull the worst sender if reply rate drops 30% below the others,
- do not increase volume until replies and bounces justify it.

Key metric

Not sends per day. **Qualified replies per 100 verified prospects**. Patel's reference: 24% open / 2–3% reply on cold-but-targeted. 550 sends/month × 2.5% = ~14 qualified replies. That is the realistic floor of the v1 "5–15/month" target — keep it, do not soften.

9. Workstream 6 — MRO recovery + Ring Care Club continuity

Objective

Protect and recover the historic ecommerce earner without letting it dominate the week — *and* add a continuity layer so MRO has recurring revenue independent of campaigns.

Priority order

1. conversion and product-page blockers,
2. tracking/schema issues,
3. high-intent SEO/AEO content (FAQ schema, comparison pages, "best ring for X" listicles),
4. campaigns only after foundations are clean,
5. Ring Care Club continuity launch (NEW, see below).

30-day actions

M1. Conversion check. Product options render, sizing visible, trust blocks visible, shipping/returns clear, checkout smooth, GA4 purchase tracking confirmed.

M2. Content cap. 2–3 high-intent pieces per week max. Best topics: best rings for tradies, tungsten vs titanium, silicone rings for work, men's ring sizing, durable wedding rings — all written as FAQ + comparison + listicle, AEO-shaped.

M3. Campaigns. Only around clear purchase intent: work-safe rings, wedding-season sizing, durability, comfort. **Hard rule retained:** never discount precious metals; promos scope to titanium/tungsten/silicone/wooden only.

M4. Money Model adaptation (NEW).

Tier	MRO offer
1. Attraction	Free silicone ring with any titanium/tungsten purchase (existing promo lane)
2. Core upsell	Engraving or signet upgrade at PDP / cart
3. Downsell	Silicone-only bundle at cart-abandon
4. Continuity	Ring Care Club — \$9/month: quarterly cleaning kit, lifetime resize discount, 1× silicone replacement guarantee per year, member-only restock alerts

Continuity is the missing piece on every ecom store. Hormozi: businesses under \$1M ARR fix continuity before they chase scale.

10. Ecommerce maintenance rules

These brands stay healthy but do not steal Tier 1 oxygen. **Each gets one meaningful action per week max** unless a revenue issue appears.

- **FOB** — priority because of wholesale. Wholesale page, gift-guide content, product/category copy.
- **BMO** — list hygiene, downloadables cleanup, one weekly wedding-planning content/campaign idea.
- **MO** — MOB/MOG positioning, fit/confidence content, category copy.
- **FGO** — lightweight seasonal content and product maintenance.
- **Helix** — performance-ring product launches, social posts, MRO support.

11. Tier 3 and gated projects

- **Kaizen Wheels** — keep pipeline running, no manual oxygen.
- **FairTraide** — small autonomous tests only. Keep separate from Allhart.
- **Bento Frame** — decision gate. Options: parked / 20-DM creator test / promote to active white-label. If promoted, only acceptable positioning is *"Turn your framework into a daily tracking app for your audience."*
- **GLL** — separate Tessa-led lane. One product at a time.
- **Nathan Art Net** — personal creative lane. Not a cash sprint project.

12. 30-day execution plan

Week 1 — build the revenue machine

- confirm verticals (trades + dentists),
- verify and AEO-equip AVP pages (FAQ schema, comparison, listicle, case study slot),
- price and document the 4-tier offer ladder,
- set up 3-sender rotation,
- build wholesale one-pager,
- build prospect lists (50/vertical Allhart, 100 wholesale),
- draft v2-opener emails,

- create reply/booking/proposal workflow,
- set up Friday objection-loop calendar slot.

Week 2 — send and learn

- send approved batches via rotated senders,
- triage replies daily,
- book calls; offer Tier 1 audit on every warm reply,
- send wholesale follow-ups,
- Friday: run objection-to-copy loop, edit next week's emails and AVP pages,
- keep OBT parked unless tester capacity opens.

Week 3 — double down on what replies

- scale the best-performing vertical / sender / angle,
- pause weak angles,
- turn replies into proof assets (each one structured as FAQ schema content for next batch's AEO seeding),
- finalise proposal templates per ladder tier,
- fix any conversion leaks.

Week 4 — convert and systemise

- push calls to Tier 1 audits and Tier 2 proposals,
- close first paid Tier 1 audits and at least one Tier 4 retainer,
- document winning scripts and email opener variants,
- publish first Allhart case study (FAQ-shaped),
- launch MRO Ring Care Club to existing customer list,
- decide next month's top vertical.

13. Weekly scoreboard

Metric	Target	Meaning
Verified prospects researched	100–200/week	Input quality
Approval-ready drafts	50–75/week (room to grow with rotation)	Outbound readiness
Approved sends per sender	≤30/day per alias, rotated	Deliverability safety
Qualified replies	10–20/month (revised up with rotation)	Market signal
Tier 1 audits sold	2–5/month starting	Cash + qualification
Calls booked	3–8/month starting	Cash path
Tier 2 proposals sent	1–4/month	Close path
Tier 4 retainers active (Allhart + MRO)	≥1 by day 30, ≥5 by day 90	Recurring revenue floor
Bounce/complaint issues	Near zero	Deliverability safety

Metric	Target	Meaning
Tier 3 manual hours	Under 10%	Focus protection
Friday objection loop completed	Yes/No each week	Copy compounding

14. 2026 growth priorities

What matters now

- AEO/GEO-ready offer pages (FAQ schema, comparison, listicle, citation seeding),
- narrow ICP outbound,
- 4-tier offer ladder on every paid lane,
- continuity revenue layer (Allhart retainer, MRO Ring Care Club),
- fast follow-up + weekly objection-to-copy loop,
- proof assets, themselves structured as AEO content,
- sender rotation as the legitimate scale lever,
- repurposed content from real sales conversations,
- automation only after the offer works.

What does not matter yet

- broad paid ads,
- generic content volume,
- vanity social growth,
- complex dashboards,
- new product ideas,
- overbuilt funnels before offer validation,
- chasing Google rank without AEO citation surface.

15. Final operating doctrine

The portfolio does not need more activity. It needs more **qualified conversations**, structured into a **4-tier offer ladder**, fed by **AEO-cited pages**, scaled through **sender rotation**, sharpened by a **weekly objection loop**, and floored by a **continuity revenue layer**.

For 30 days, the rule is simple: pick the highest-cash lanes, build the exact page/offer/ladder they need, send approved outreach to verified prospects via rotated senders, follow up fast, convert replies into Tier 1 audits and Tier 2 proposals, attach Tier 4 retainers to every close, kill weak lanes quickly, and turn winners into repeatable systems.

That is how the portfolio gets cash now, recurring revenue in 90 days, and compounding value in 12 months.

Appendix — sources behind the v2 adjustments

Hormozi: *\$100M Money Models* (Aug 2025) — 4-tier attraction/upsell/downsell/continuity structure; sub-\$1M ARR continuity rule; volume-creates-skill applied to outreach reps. Acquisition.com training pages and 2025 podcast appearances.

Patel: NP Digital 2026 LLM citation share research — AI search drives ~1% of traffic but 9.7% B2B / 11.4% B2C revenue. Cold outbound deliverability ceiling 30–40/day per address; rotation as legitimate scale lever. neilpatel.com/blog 2025–2026.

Deiss: Customer Value Journey + AI-Powered CVO Model + SOS (Scalable Operating System) 2025 — discipline-and-systems framing retained from v1; *"marketing without operations leads to founder demise"*. digitalmarketer.com and scalable.co 2025.
